Use cases in education, children's services and beyond

We are excited to announce the first in a series of AI webinars hosted by Coram-i.

In collaboration with our partners **Leading AI**, and CII members **North Yorkshire Council,** this inaugural webinar will explore the transformative potential of AI in education, children's services, and other sectors.

The event will feature demonstrations of AI tools, case studies, and presentations from leading experts as well as a look at how to realise the benefits and manage the risks of introducing generative AI into your teams.

About the webinar

At this webinar, we will:

- Provide an overview of AI applications in various sectors, with a focus on emerging AI technology in education and children's services
- Demonstrate some key AI tools and their practical uses
- Share real-world case studies showcasing the potential for AI to make a difference in children's social care
- Foster a deeper understanding of how AI can enhance service delivery and outcomes in different domains

Who should attend?

- Practitioners and leaders in children's services, education and the wider public and voluntary sector
- Data scientists and AI enthusiasts interested in AI applications that improve outcomes for children
- Policymakers and researchers
